

KINVET GutMaster

“Happy Guts. Healthy Birds. Happier Profits.”

Quick Start: How to Use KINVET GutMaster

Everyday Well-Being

- **Week 1–2:** Stir in **1 kg KINVET GutMaster** per **1 ton** of feed.
- **Afterward:** Reduce to **500 g per ton** for ongoing support.

When Your Flock Needs an Extra Boost

- For signs of sluggish growth or loose droppings, mix **2 kg per ton** of feed for **5–7 days**.
 - Once things look back to normal, switch back to the normal usage recommendation.
-

Farmer’s Do’s – Best Practices to Follow

1. Seal in the Goodness

- Store KINVET GutMaster in a **cool, dry spot**—away from sunlight or dampness.
- Always **close the bag tightly** after scooping out your dose.

2. Blend Thoroughly

- Sprinkle it in slowly while blending feed to ensure **even coverage**.
- A consistent aroma through the batch means it’s mixed just right.

3. Fresh Water Matters

- Offer **clean, fresh water** every day—your probiotics and enzymes need it to work.
- Rinse drinkers regularly; nothing undoes progress like dirty water.

4. Keep an Eye on Droppings & Growth

- Watery or foul-smelling droppings are your early warning.
- If you spot issues, bump up the dose until droppings firm up and birds perk back up.

5. Dry, Airy Housing

- Damp litter invites disease. Remove wet spots daily and ensure good airflow.

If this problem is affecting your farm then use **KINVET GutMaster** to minimize the chances of losses.

6. **Universal Safety**

- KINVET GutMaster is safe for **broilers, layers, breeders, and backyard flocks**—no withdrawal periods.

Farmer's Don'ts – Avoid These Mistakes:

1. **Don't Overdo It**

- Follow the recommended dose. When in doubt, ask your vet, not guess.

2. **Don't Let Bags Go to Waste**

- Exposed powder loses potency. Keep bags sealed/closed tight.

3. **Don't Mix with Strong Antibiotics—Unless Advised**

- Let KINVET GutMaster's natural balance work first; add antibiotics only on veterinary advice.

4. **Don't Skip Cleaning Feeders & Drinkers**

- Old feed and stagnant water can reverse all your gut-health gains.

5. **Don't Panic at the First Sign of Upset**

- A quick course of KINVET GutMaster usually brings things back to normal in 4-5 days.

6. **Don't Overlook Biosecurity**

- Limit foot traffic, use footbaths, and keep visitors in check to reduce disease risks.

Farmer Tip

“Your birds may be quiet – but their gut tells the story loud and clear. A strong gut with KINVET GutMaster means fewer medicines, faster growth, and better profits.”
