

KINVET RenalGuard

“Clear Kidneys, Clean Droppings, Consistent Growth.”

How to Use KINVET RenalGuard

Daily Dose for All Poultry Types

- Mix 1 kg of KINVET RenalGuard per ton of feed for continuous support of kidney function.
- Use daily during periods of stress, high protein feeding, or early signs of renal imbalance.

When to Give an Extra Boost

- If droppings become watery, birds show dehydration, or feed intake drops, continue use for minimum 14 days.
 - For chronic or recurrent issues, consult your veterinarian or nutritionist.
-

Farmhand Favorites: Do's

1. Store It Right

- Keep KINVET RenalGuard in a cool, dry place. Humidity and heat weaken herbal potency.

2. Mix It Evenly

- Blend it thoroughly in feed for uniform intake—don't let clumps sit in the corners.

3. Hydrate Your Birds

- Ensure a steady supply of clean, cool water—KINVET RenalGuard supports kidneys, but water activates the process.

4. Partner with Protein Balance

- Use KINVET RenalGuard especially when birds are on **high-protein diets**. It buffers the load on kidneys effectively.
-

Farmer's Don'ts – Avoid These Mistakes:

1. Don't Guess the Dose

- Over- or under-dosing can reduce effectiveness. Stick to **1 kg per ton**, unless advised otherwise.

2. Don't Leave the Bag Open

- Air exposure weakens the herbs and probiotics. Always seal/close tightly after use.

3. Don't Mix with Antibiotics Without Advice

- Check with your vet before combining treatments.

4. Don't Delay Response

- If birds show signs like lethargy, excessive drinking, or urate-heavy droppings, **start KINVET RenalGuard immediately.**

Pro Tip

“Add KINVET RenalGuard when protein goes up or seasons turn harsh. It’s your birds’ natural kidney guard, working quietly to keep their systems clean and productive—without a single drop of synthetic chemical.”
