

## KINVET PlacenCare

**Rapid Recovery. Restored Fertility. Healthier Herd.**

### How to Use KINVET PlacenCare

To manage post-calving reproductive stress and support uterine recovery:

**Administer 200 ml within 1 hour after calving, followed by:**

- **100 ml after 12 hours**
- **100 ml daily for the next 2 days**  
*Or as directed by the veterinarian*

---

Farmer Practices: Do's

Use KINVET PlacenCare in the following situations:

- After calving to promote placenta expulsion
- In cows showing signs of retained placenta
- In cases of prolonged labor or assisted delivery
- When there is foul discharge or uterine swelling
- In high-risk herds with metritis history
- During calving season when stress is high
- For faster uterine recovery and next conception

---

### Farmer's Don'ts – Avoid These Mistakes:

- Don't delay first dose — administer within 1 hour of calving
- Don't skip any dose in the 3-day course
- Don't mix with other ecbolics without vet guidance
- Don't store in sunlight or moisture-prone areas
- Don't use expired product — check shelf life

### Pro Tip

*“Better recovery means better fertility. Start the next lactation strong with KINVET PlacenCare — your cow's post-partum power shot.”*
