

KINVET ReproMax

Fertility starts with the right feed.

How to Use KINVET ReproMax

Daily usage for Dairy Cattle:

- ◆ 25 grams per animal per day

Method of Administration:

◆ Mix thoroughly with the regular feed or Total Mixed Ration (TMR) for easy and consistent intake.

Frequency of Use:

- ◆ Administer once daily, preferably during the morning feeding.
- ◆ Use continuously for at least 60 days for optimal reproductive benefits or as advised by your veterinarian.

Farmer Practices: Do's

- ✓ During irregular or silent heat cycles
- ✓ In cows or buffaloes with history of low conception rates or repeat breeding
- ✓ After calving to prepare the reproductive system for next breeding
- ✓ During pre-breeding and post-breeding phases for higher conception success
- ✓ Under oxidative or nutritional stress
- ✓ When dietary gaps in trace minerals or vitamins are suspected
- ✓ As part of estrus synchronization protocols

Farmer's Don'ts – Avoid These Mistakes:

✓ Do's

- Store in a cool, dry place away from sunlight to maintain potency.
- Keep the pack tightly sealed after every use.
- Mix thoroughly in daily feed to ensure uniform intake.
- Use during pre- and post-breeding periods to maximize impact.
- Consult a veterinarian in case of reproductive disorders or non-responsiveness.
- Observe estrus signs regularly to track improvement.

Pro Tip

“Every missed heat is a missed opportunity. Keep your herd on track with **KINVET ReproMax.**”
